## SeaKey Satellite Boat Monitoring System

You and your boat are always connected—SeaKey is a satellite based communication system that communicates important boat data along with vital emergency messages via satellite. An integrated GPS receiver pinpoints the boats location. SeaKey system monitors the boat for high water in the bilge, low batteries or on the water emergency. You can set a virtual perimeter around the boat to alert you or the authorities in the event of theft. Vessel tracking via satellite can be monitored from your home or office with the SeaKey Personal Website. The SeaKey Display is has an intuitive user interface on a backlit display. You can send text messages to and from the vessel. This is a reliable and convenient method of communication when you are beyond cell phone or VHF range. There is an SOS button that is used in emergency when there is no time to spare. This provides instant communication to the SeaKey Response Center that is monitored 24 hour a day, 7 days a week, 365 days a year. The Response center is there to help in emergency and will contact the Coast Guard, Marine Patrol or Towing Service. They are there also to provide you with Concierge service to make slip or restaurant reservations, weather forecast, rental car and much more. The heart of the system is the ruggedly build SeaKey Main Unit that is designed to withstand the harshest elements. The GPS antenna and receiver is included. The satellite antenna is available is a basic 4' that will do the job just fine or 6.5' high quality construction model to possibly match up with other antenna's on board.
